IN THE CLAIMS:

Please amend Claims 1 and 2 as follows:

- 1. (amended) In a system for digital information processing [process], said system having a memory, a method for generating data representative of [finding] a quotient $Q = a_0a_1a_2...a_b$ from data representative of a divisor $Y = y_1y_2...y_n$ and data representative of a dividend $X = x_1x_2...x_a$, comprising the [following] steps of:
 - (a) aligning the first non-zero bit of X with the first non-zero digit of Y;
 - (b) defining a signed-digit partial remainder series R_i where $R_0 = Y$, a first sign series of the partial remainder S_i where $S_0 = 0$, a second sign series of the partial remainder S_{ri} , a quotient bit series a_i , and a counter i beginning from zero;
 - (c) subtracting X from R_i which yields next signed-digit partial remainder R_{i+1} ;
 - (d) setting the sign of R_{i+1} to S_{ri+1} ;
 - (e) setting the result of exclusive-OR of S_i and S_{ri+1} to the true sign of the next remainder S_{i+1} ;
 - (f) setting a_i to 1 if $S_{i+1} = 0$ or $R_{i+1} = 0$;
 - (g) setting a_i to 0 if $S_{i+1} = 1$;
 - (h) inverting the signs of all digits of R_{i+1} if $S_{i+1} = 1$;

27

- (i) shift R_{i+1} left by one bit;
- (j) adding 1 to i; [and]
- (k) repeating [said] steps (c) to (j) until i reaches a predetermined value or $R_{i+1} = 0[.]$; and
- (1) storing in said memory as said data representative of a quotient, a quotient resulting from step (k).
- 2. (amended) In a system for digital information processing [process], said system having a memory for storing data, a method for generating data representative of [finding] a signed magnitude quotient $Q_2 = a_s a_0.a_1 a_2....a_b$ from data representative of a signed divisor $Y_s = y_s.y_1y_2....y_n$, and data representative of a signed dividend $X_s = x_s.x_1x_2....x_s$, comprising the [following] steps of:
 - (a) obtaining a_s from the result of exclusive-OR of y_s and x_s ;
 - (b) defining a divisor $Y = y_1y_2...y_n$, a dividend $X = x_1x_2...x_s$, a signed-digit partial remainder series R_i where $R_0 = Y$, a first sign series of the partial remainder S_i where $S_0 = 0$, a second sign series of the partial remainder S_{ri} , a quotient bit series \underline{a}_i , and a counter i beginning from zero;
 - (c) aligning the first non-zero bit of X with the first non-zero digit of Y;
 - (d) subtracting X from R_i which yields next signed-digit partial remainder R_{i+1} ;
 - (e) setting the sign of R_{i+1} to S_{ri+1} ;
 - (f) setting the result of exclusive-OR of S_i and S_{ri+1} to the true sign of the next remainder S_{i+1} ;

- (h) setting a_i to 0 if $S_{i+1} = 1$;
- (i) inverting the signs of all digits of R_{i+1} if $S_{i+1} = 1$;
- (j) shift R_{i+1} left by one bit;
- (k) adding 1 to i; and
- (l) repeating [said] steps (d) to (k) until i reaches a predetermined value or $R_{i+1} = 0$ [.]; and
- (1) storing in said memory as said data representative of a signed magnitude quotient, a quotient resulting from step (k).

Please add new Claims 3 and 4 as follows:

- 3. (new) A system for digital information processing, said system having a memory for storing data, including data representative of a quotient $Q = a_0a_1a_2...a_b$ from data representative of a divisor $Y = y_1y_2...y_n$ and data representative of a dividend $X = x_1x_2...x_a$, said data representative of a quotient generated by a method comprising the steps of:
 - (a) aligning the first non-zero bit of X with the first non-zero digit of Y;
 - (b) defining a signed-digit partial remainder series R_i where $R_0 = Y$, a first sign series of the partial remainder S_i where $S_0 = 0$, a second sign series of the partial remainder S_{ri} , a quotient bit series a_i , and a counter i beginning from zero;

24

- (c) subtracting X from R_i which yields next signed-digit partial remainder R_{i+1} ;
- (d) setting the sign of R_{i+1} to S_{ri+1} ;
- (e) setting the result of exclusive-OR of S_i and S_{ri+1} to the true sign of the next remainder S_{i+1} ;
- (f) setting a_i to 1 if $S_{i+1} = 0$ or $R_{i+1} = 0$;
- (g) setting a_i to 0 if $S_{i+1} = 1$;
- (h) inverting the signs of all digits of R_{i+1} if $S_{i+1} = 1$;
- (i) shift R_{i+1} left by one bit;
- (j) adding 1 to i;
- (k) repeating steps (c) to (j) until i reaches a predetermined value or $R_{i+1} = 0$; and
- (l) storing in said memory as said data representative of a quotient, a quotient resulting from step (k).
- 4. (new) A system for digital information processing, said system having a memory for storing data, including data representative of a signed magnitude quotient $Q_2 = a_s a_0.a_1 a_2....a_b$ from data representative of a signed divisor $Y_s = y_s.y_1y_2....y_n$, and data representative of a signed dividend $X_s = x_s.x_1x_2....x_s$, said data representative of a signed magnitude quotient generated by a method comprising the steps of:
 - (a) obtaining a_s from the result of exclusive-OR of y_s and x_s ;

B-2750/614323-8

- (b) defining a divisor $Y = y_1y_2....y_n$, a dividend $X = x_1x_2....x_s$, a signed-digit partial remainder series R_i where $R_0 = Y$, a first sign series of the partial remainder S_i where $S_0 = 0$, a second sign series of the partial remainder S_{ri} , a quotient bit series a_i , and a counter i beginning from zero;
- (c) aligning the first non-zero bit of X with the first non-zero digit of Y;
- (d) subtracting X from R_i which yields next signed-digit partial remainder R_{i+1};
- (e) setting the sign of R_{i+1} to S_{ri+1} ;
- (f) setting the result of exclusive-OR of S_i and S_{ri+1} to the true sign of the next remainder S_{i+1} ;
- (g) setting a_i to 1 if $S_{i+1} = 0$ or $R_{i+1} = 0$;
- (h) setting a_i to 0 if $S_{i+1} = 1$;
- (i) inverting the signs of all digits of R_{i+1} if $S_{i+1} = 1$;
- (j) shift R_{i+1} left by one bit;
- (k) adding 1 to i;
- (l) repeating steps (d) to (k) until i reaches a predetermined value or $R_{i+1} = 0$; and
- (m) storing in said memory as said data representative of a signed magnitude quotient, a quotient resulting from step (l).
